

What Does It Mean to Be An NBP Certified Agency?

In order to be admitted and certified to the National Biosolids Partnership's World Class Biosolids Environmental Management System Program, an organization must meet five requirements:

1. The agency has documented its responsibility for the Biosolids Value Chain-pretreatment, treatment and final use;
2. The agency has committed to the 10 principles in the National Biosolids Partnership's Code of Good Practice;
3. The agency operates a Biosolids Environment Management System that meets all the National Biosolids Partnership's requirements;
4. The agency has committed to make continual improvements in their Environmental Management System for environmental performance; regulatory compliance; public participation; and quality biosolids management practices; and
5. The agency has successfully completed a fully independent audit of its Environmental Management System and has been verified by a National Biosolids Partnership's accredited company.

The NBP Seal of Approval means that the agency has been certified by the NBP

The following agencies have received NBP certification of their biosolids EMS program:

Orange County Sanitation District – Fountain Valley, CA (certified 7-17-03)
